$ whoami

Senior Software Engineer with 9+ years of experience owning applications end to end: from requirements and API design through implementation, testing and CI/CD delivery, to deployment and production monitoring. Designed an API gateway platform, built resilient third-party integrations and designed database schemas for high-traffic endpoints.

[01] experience

- **Senior Software Engineer · The Codest · Warszawa** Apr 2026 – now
  typescript · kubernetes · datadog · docker · vue · storybook
  - Maintain and develop backend services and platform endpoints, including SQL performance optimisation (indexing) and security.
  - Deploy and operate services on Kubernetes; monitor with Datadog (dashboards, alerts, tracing) to catch regressions and latency issues early.
  - Built end-to-end test suites covering full request paths, catching regressions before release.
  - Maintained frontend applications across development, testing and deployment; contributed to the core UI library and Storybook docs for shared components.
- **Senior Software Engineer · Coldrun · Warszawa** Jul 2024 – Apr 2026
  nestjs · node.js · typescript · mongodb · docker · github actions · vitest
  - Architected a centralized API gateway platform with integration standards and security policies, serving ~8 internal services and consumed by backend, frontend and partner-integration teams.
  - Built resilient integrations with 3 third-party platforms, including an invoicing platform: retries with exponential backoff, idempotent requests, structured error handling, dead-letter queue and alerting. Handled ~10k documents/month with <0.1% unrecoverable failures.
  - Delivered an order management module using Clean Architecture, with 100+ configurable parameters, processing ~5k orders/day for ~50 customers.
  - Maintained CI/CD (GitHub Actions) and Docker setup; wrote unit and integration tests in Vitest.
- **Software Engineer · Ergonode (PIM) · Kraków** Feb 2022 – Mar 2024
  vue · nuxt.js · graphql · rest api
  - Led the Vue 2 → Vue 3 and Vuex → Pinia migration; co-created a PrimeVue + Tailwind design system used by 3 internal apps.
  - Designed API contracts with backend engineers for complex product data models.
  - Integrated GraphQL APIs with deeply nested data, reducing data-fetching errors; fixed performance bottlenecks in data-heavy views.
  - Led a redesign of core PIM views, cutting support requests and improving onboarding completion.
- **Software Engineer · Scooploop · London, UK** Mar 2018 – Jan 2022
  python · django · postgresql · docker · nginx · vue
  - Built REST APIs (Django) with JWT auth and RBAC; designed and optimized PostgreSQL schemas and indexes for high-traffic endpoints.
  - Added background tasks and a real-time notification system (Django + WebSockets + Vue).
  - Managed Hetzner infrastructure (Nginx, SSL, Docker) and GitHub Actions CI/CD.

[02] stack

core:	typescript, nestjs, node.js, postgresql, docker, kubernetes, rest, ci/cd (github actions)
architecture:	clean architecture, api gateway, rbac, background jobs, websockets, integrations
observability:	datadog, vitest, unit / integration / e2e
also_used:	django, express, fastify, graphql, mongodb, vue 3 / nuxt / pinia, tailwind, storybook, nginx, linux
ai_tooling:	claude code, codex, jev, pi, github copilot
spoken:	polish (native), english (professional working proficiency)

[03] hobby

Hiking: completed Korona Polskich Gór; next goal: Główny Szlak Beskidzki.
