Patryk Makuch

Software Engineer

makuchpatryk@gmail.com / +48 505 910 638 / makuchpatryk.com / github ↗ / linkedin ↗

```
$ whoami
```

Senior engineer with 9+ years of experience building and operating backend systems in Node.js/NestJS and Python (FastAPI, Django). Designed a centralized API gateway platform (JWT auth, versioning, rate limiting, security policies), built resilient third-party integrations with retry and structured error handling, and designed PostgreSQL schemas and indexing strategies for high-traffic endpoints. Comfortable owning services end to end — API design, data modelling, Docker, CI/CD, Nginx, and VPS deployments. Strong Vue 3/TypeScript background makes cross-boundary work and API contract design straightforward.

```
$ cat stack.yaml
```

```
backend: nestjs, node.js, express, fastify, fastapi, django, rest, graphql
languages: typescript, javascript, python, php
databases: postgresql (schema design, indexing, query optimization), mongodb, mysql
architecture: clean architecture, modular/domain-oriented design, api gateway patterns, jwt auth, rbac,
  background jobs, websockets
devops: docker, nginx, github actions, ci/cd, linux, hetzner vps, ssl/tls
testing: vitest, unit & integration, e2e
ai_tooling: github copilot, claude code, llm-assisted development
frontend: vue 2/3, nuxt.js, pinia, vuex, tailwind css, primevue, storybook
other: git, agile/scrum, code review, mentoring
spoken: polish (native), english (professional working proficiency)
```

[01] experience

Experience

- current

Apr 2026 – now

Senior Software Engineer

The Codest · Warszawa

 - Contribute to backend development in Python and FastAPI, implementing platform endpoints and supporting service-side requirements alongside product work.
 - Build and maintain end-to-end test suites covering full request paths, catching regressions across environments before release.
 - Deliver frontend features and refactor core UI library components, improving consistency and reducing maintenance burden across multiple internal products.
 - Maintain Storybook documentation for shared UI components, improving collaboration with design and product teams.
 - Use Claude Code to streamline development workflows, improving delivery velocity and code review quality.

Senior Software Engineer

Coldrun · Warszawa

 - Architected a centralized API gateway platform for external services: defined integration standards, JWT-based authentication, API versioning, rate limiting, and security policies across the ecosystem.
 - Built resilient integrations with external systems (invoicing platforms) using retry strategies, structured error handling, and monitoring — ensuring high availability of the integration layer.

- Developed backend services in NestJS with MongoDB, applying Clean Architecture principles to keep domain logic isolated and testable.
- Designed and delivered a large-scale order management module (100+ configurable parameters) using a modular architecture pattern — reduced onboarding time for new developers on the module from 2 weeks to 3 days.
- Maintained and extended CI/CD pipelines (GitHub Actions) and containerized services with Docker.
- Wrote unit and integration tests with Vitest, maintaining high coverage on critical modules.
- Provided technical leadership: mentored 3 junior/mid developers, ran weekly code reviews, and led architectural discussions — contributing to a measurable reduction in defect rate over 6 months.
- Led the Vue 2 → Vue 3 migration and Vuex → Pinia refactor across the frontend codebase, and co-created a design system library (PrimeVue + Tailwind) adopted by 3 internal applications.

nestjs node.js typescript mongodb docker github actions vitest vue 3

Frontend Developer

Ergonode.com (PIM) · Kraków

- Designed and aligned API contracts with backend engineers, coordinating data structures and integration points for complex, dynamic product data models.
- Integrated GraphQL APIs handling deeply nested product data structures, improving data consistency and significantly reducing data-fetching errors.
- Profiled and resolved performance bottlenecks in data-heavy views, including query shape and payload size on the API boundary.
- Led a redesign of core PIM views based on user feedback — measurably reduced support request volume and improved onboarding completion rate.
- Participated in Scrum ceremonies and technical decision-making on the platform's development direction; translated business requirements into technical specifications with product and design.

graphql rest api nuxt.js vue 2 javascript

Full-Stack Developer

Scooploop.com · London, UK

- Designed and built REST APIs for core platform features (user profiles, posts, comments, follows), including JWT-based authentication and role-based access control.
- Designed and optimized PostgreSQL schemas for the social graph and content models; introduced query optimizations and indexing strategies that significantly reduced average API response time.
- Implemented background task processing for email notifications and feed generation using Django's task queue, improving platform responsiveness under load.
- Built a real-time notification system and dynamic post/comment threads (Django + WebSockets + Vue), increasing daily active user engagement.
- Managed server infrastructure on Hetzner: provisioned Linux environments, configured Nginx as reverse proxy, handled SSL termination, and maintained Docker-based service deployments.
- Set up and maintained CI/CD pipelines (GitHub Actions) for automated testing and deployment — reducing manual deployment effort and eliminating environment inconsistencies.

python django postgresql docker nginx github actions hetzner vue

Web Developer

Tekpaw · London, UK

- Developed custom WordPress plugins and PHP templates to support client-specific functionality beyond standard CMS capabilities.
- Managed MySQL databases for content-heavy sites: schema setup, data migration, and query optimization.
- Migrated multiple client sites to WordPress with custom themes and responsive layouts.
