\$ whoami

Senior engineer with 9+ years building and running backend systems in Node.js/NestJS and Python (FastAPI, Django). Designed an API gateway platform (JWT auth, versioning, rate limiting), built resilient third-party integrations, and designed PostgreSQL schemas for high-traffic endpoints. Owns services end to end, from API design to Docker, CI/CD and deployment. Strong Vue 3/TypeScript background.

[01] experience

● Senior Software Engineer

Apr 2026 – now

The Codest · Warszawa

- Backend development in Python/FastAPI: platform endpoints and service-side requirements.
- End-to-end test suites covering full request paths, catching regressions before release.
- Frontend features and refactor of the core UI library; maintained Storybook docs for shared components.

python fastapi typescript vue e2e storybook

○ Senior Software Engineer

Jul 2024 – Apr 2026

Coldrun · Warszawa

- Architected a centralized API gateway platform: integration standards, JWT auth, API versioning, rate limiting, security policies.
- Built resilient integrations with invoicing platforms (retries, structured error handling, monitoring).
- Developed NestJS + MongoDB services using Clean Architecture; delivered an order management module with 100+ configurable parameters.
- Maintained CI/CD (GitHub Actions) and Docker; wrote unit and integration tests in Vitest.
- Mentored 3 junior/mid developers and ran weekly code reviews, reducing defect rate over 6 months.
- Led the Vue 2 → Vue 3 and Vuex → Pinia migration; co-created a PrimeVue + Tailwind design system used by 3 internal apps.

nestjs node.js typescript mongodb docker github actions vitest vue 3

○ Frontend Developer

Feb 2022 – Mar 2024

Ergonode.com (PIM) · Kraków

- Designed API contracts with backend engineers for complex product data models.
- Integrated GraphQL APIs with deeply nested data, reducing data-fetching errors; fixed performance bottlenecks in data-heavy views.
- Led a redesign of core PIM views, cutting support requests and improving onboarding completion.

graphql rest api nuxt.js vue 2

○ Full-Stack Developer

Mar 2018 – Jan 2022

Scooploop.com · London, UK

- Built REST APIs (Django) with JWT auth and RBAC; designed and optimized PostgreSQL schemas and indexes, significantly reducing API response time.
- Added background tasks and a real-time notification system (Django + WebSockets + Vue).
- Managed Hetzner infrastructure (Nginx, SSL, Docker) and GitHub Actions CI/CD.

python django postgresql docker nginx vue

[02] stack

\$ cat stack.yaml

```
backend:      nestjs, node.js, express, fastify, fastapi, django, rest, graphql
languages:    typescript, javascript, python
databases:    postgresql (schema design, indexing, query optimization), mongodb, mysql
architecture: clean architecture, modular design, api gateway, jwt auth, rbac, background jobs, websockets

devops:       docker, nginx, github actions, linux, hetzner vps
testing:      vitest, unit, integration, e2e
frontend:     vue 2/3, nuxt.js, pinia, tailwind css, primevue, storybook
ai_tooling:   github copilot, claude code
spoken:       polish (native), english (professional working proficiency)
```
